## **BAROTZ DENTAL TO OFFER MINIMALLY INVASIVE PROCEDURE TO “LOCK-IN” DENTURES**

**Denver, CO, October 21, 2008** – Barotz Dental, a well-known “total dental solutions” practice is now offering MDI (mini dental implants), the most effective system for stabilizing dentures. Made from titanium alloy, one of the strongest metals on earth, MDIs provide strength allowing the implants to withstand normal biting forces similar to natural teeth. An innovative departure from the standard implant methods, the mini implants eliminate cutting and stitches, therefore offering a more pain-free procedure. After an initial consultation, the patient is scheduled for the implant and is typically finished with the procedure within one-hour. Another great benefit of the mini dental implant is that it is relatively inexpensive compared to standard implants.

There are approximately 30,000,000 people in the United States who are lacking teeth and struggle with loose or ill-fitting dentures. Consequently, these people may withdraw from social situations for lack of confidence in their dentures. Additionally, it is not uncommon for family members to complain about a denture wearers' breath due to food particles being trapped under their dental prosthesis. Successful placement of the MDI addresses and solves all of these social and practical problems and concerns.

As with all dental applications, there is a short adjustment period during which the patient becomes comfortable placing and removing the denture. Typically this involves removal of the dentures in the morning, brushing the gums and the implant area, rinsing the denture itself, and then replacing it.

“There is nothing better than helping someone regain confidence in their self,” stated Dr. Charles Barotz. “It is one of the reasons why I went into dentistry. Mini dental implants can help restore a person’s self-assurance allowing them to continue with the lifestyle they are accustomed.”

Dr. Charles S. Barotz is a 1980 graduate of Georgetown University School of Dentistry and has dedicated his life to provide the best that dentistry has to offer. Dr. Barotz is continually educating himself and his staff with the newest dental techniques and approaches, in order to provide advanced, state of the art, comfortable, personalized, and antiseptic dental care. Dr. Barotz has been published and lectures internationally on numerous subjects relating to excellence in dentistry.
